Natural Numbers

DEFINITION:

All counting numbers starting with one.

IMPORTANT:

Zero and negative numbers are not Natural Numbers.

EXAMPLE:

1,2,3,4,5,6,7,8,9,10,11...

MATH IS AS SIMPLE AS 1,2,3

101112131415161718192010111213141516171819201011121314151617181920

Whole Numbers

DEFINITION:

All counting numbers
starting with zero.

IMPORTANT:

Fractions and decimals
are not Whole Numbers

EXAMPLE:

0,1,2,3,4,5,6,7,8,9,10....

MATH IS AS SIMPLE AS 1,2,3

101112131415161718192010111213141516171819201011121314151617181920

Integers

DEFINITION:

Positive or negative whole numbers including zero.

EXAMPLE # 1:

-8, -7, -6, -5, -4, -3, -2, -1, 0

EXAMPLE # 2:

0, +1, +2, +3, +4, +5, +6, +7, +8,

Rational Numbers

DEFINITION:

A number that can be written as a fraction.

Ending(terminating)decimal numbers and numbers that repeat are also rational.

EXAMPLE:

$0.5 = \frac{1}{2}$, $0.75 = \frac{3}{4}$,
 $0.666\dots = \frac{2}{3}$

Real Numbers

DEFINITION:

All rational and irrational numbers.

IMPORTANT:

All real numbers are found on the number line.

EXAMPLE:

$0, +1, +2, -2, -1, 0, 0.5 = \frac{1}{2}$

MATH IS AS SIMPLE AS 1,2,3

101112131415161718192010111213141516171819201011121314151617181920

Imaginary Numbers

DEFINITION:

Imaginary numbers are square roots of negative numbers.

IMPORTANT:

They are all real numbers multiplied by $i = \text{(the square root of } -1\text{)}$

EXAMPLE:

$4i$ is an imaginary number and its square is -16 .

MATH IS AS SIMPLE AS 1,2,3

Complex Numbers

DEFINITION:

A complex number is a number that can be written in the form $a+bi$, a and b are real numbers and i is the imaginary unit. A complex number is a combination of a real number and an imaginary number.

EXAMPLE:

$$(a+bi) + (c+di) = (a+c) + (b+d)i$$

$$(3+2i)+(1+7i)=(4+9i)$$

MATH IS AS SIMPLE AS 1,2,3
